

NATURES OWN LUBRICATION & CORROSION PROTECTION

USER GUIDE

ANTENNAS/AERIALS

Due to the composition of dissimilar metals and high thermal cycling rates Ozspray provides exceptional protection to all metal antennas/aerials.

Ozspray's pro-active and base metal penetration qualities safeguard your equipment at all times, especially in severe corrosive environments.

BENEFITS: Penetrates joints
Penetrates base metals
Electrolysis is reduced
No seizing of fittings
Retards the oxidization process

TECHNICAL

1. Remove all flaking and oxidation with a wire brush.
2. Apply Ozspray or Woolube Grease to the antenna installation.
3. Before application all components must be dry and should be carried out on a warm to hot day for best results.
4. Woolube can be used as an anti-seize during installation on all bolts and nuts to protect and extend the life of your antenna.
5. Non-conductive to 70Kv but will not impede electrical contacts
